

# iNtegrate2 Workday Project Testing and Training Timeline

August 2016 to October 2017

**NSHE's Workday configuration is tested thoroughly, over and over again.** It's a complex undertaking involving multiple phases and the painstakingly purposeful introduction of factors that will affect Workday's everyday operation. And because Workday is so customizable, NSHE tests it with real-world situations, known as 'scenarios.' This rigorous level of testing helps ensure that Workday will work the same way for everyone at every institution, and that it will deliver consistent, error-free results.

## August to November 2016

**Unit Testing:** Tests that a set of pre-created steps used to accomplish a given task returns the expected result.

## November 2016 to February 2017

**System Testing:** Examines how information flows through the entire Workday system in P2, from single-step processes out to all of the interconnected functions that handle data at every click. It also tests any third-party integrations that are ready for accuracy.

## February and May 2017

**Lessons Learned:** The Project reviews previous testing protocols and outcomes to refine the administration of future testing phases.

## March to May 2017

**End-to-End Testing:** Verifies that the whole Workday configuration is functioning as expected without errors in data or calculations. It also tests all integrations and customized reporting as well. Once the entire system is verified to reflect how NSHE will use it, customized training materials can be developed.

## June to August 2017

**User Acceptance Testing (UAT):** Tests the effectiveness of training materials and how well Workday meets the everyday and long term needs of NSHE institutions and workers.

## August to October 2017, and Beyond

**End User Training:** iNtegrate 2 and the institutions begin Workday training customized especially for NSHE communities.
